

# Steel Frame Home Saves Lives In Alabama!

When the awesome forces of nature strike, your family's safety is of the utmost importance. Steel has the highest strength to weight ratio of any framing material and as such the safety of your family and prized possessions deserve to be protected by an envelope of steel.

During those devastating storms in June, a 100+ year old oak tree in Muscle Shoals, Alabama was blown down by an F1 tornado on this steel frame home. At the time, Mr. & Mrs. Nipper were in the room where the tree hit the roof!

Thanks to the strength of the steel framing, their lives were spared. Thank God for our steel frame home!

The tree had come down right over a large window and it wasn't even damaged.

You can not even get your arms around that tree!

Our steel frame homes are engineered to meet any code in the world. We have supplied framing packages for wind codes in excess of 170 mph and in areas where seismic conditions are extreme.

Trust your lives and possessions to steel and the REPco system!
